

## ENGINEERING DIRECTIVE

A handwritten signature in black ink, reading "Thomas F. Broslevick".

CHIEF ENGINEER

### CANTILEVER RETAINING WALLS

Effective immediately, the *1996 Metric Edition Construction and Traffic Standard Details* and the *1977 [English Edition] Construction Standards* are amended with the following new drawings (attached):

- 305.1.0 Typical Cantilever Retaining Wall Section**
- 305.2.0 Cantilever Retaining Walls – Dense Foundation Soils, Sloping Backfill**
- 305.3.0 Cantilever Retaining Walls – Dense Foundation Soils, Level Backfill, Surcharge**
- 305.4.0 Cantilever Retaining Walls – Loose Foundation Soils, Sloping Backfill**
- 305.5.0 Cantilever Retaining Walls – Loose Foundation Soils, Level Backfill, Surcharge**
- 305.6.0 Cantilever Retaining Walls – Rock Foundation, Sloping Backfill**
- 305.7.0 Cantilever Retaining Walls – Rock Foundation, Level Backfill, Surcharge**

These drawings may be used on any applicable project, effective immediately. For projects designed in Metric units, dimensions and quantities shown on these drawings shall be converted to logical Metric units with the approval of the Projects Division.

If Cantilever Retaining Walls are used, the contract documents shall include Special Provisions that describe the work, location(s) and any known geotechnical information that indicates the nature or strength of the foundation material(s).

The Resident Engineer shall confirm that the design parameters are appropriate based on actual field conditions. If no geotechnical information is available, the Resident Engineer should request assistance from the Geotechnical Engineer prior to authorizing construction of the wall(s). In these cases, the Geotechnical Engineer shall determine the foundation condition(s). Discrepancies regarding foundation conditions shall be resolved through consultation between the Resident Engineer, the designer, the contractor and the Geotechnical Engineer.

All cement concrete shall be placed in accordance with the requirements of Section 901. Cement Concrete Masonry and shall meet the material requirements of Section M4.02.00 Cement Concrete. All reinforcing steel shall meet the material requirements of Section M8.01.0 Reinforcing Bars.

Cantilever Retaining Walls shall be estimated and bid using the following items:

693.	Concrete for Wall Footing	Cubic Yard, Cubic Meter
694.	Concrete for Wall Stem	Cubic Yard, Cubic Meter
695.	Reinforcing Steel	Pound, Kilogram

Payment under these items shall include compensation for all necessary labor, equipment and materials to complete the work to the satisfaction of the Engineer. Necessary weep holes shall be included under Item 694. Necessary form liners shall be paid under a separate item, unless specified otherwise.

Excavation shall be paid for at the contract unit prices under Item 141. Class A Trench Excavation or Item 144. Class B Rock Excavation. Payment under these items shall include full compensation for all necessary shoring or sheeting. Backfilling shall be paid for at the contract unit price under Item 151.2 Gravel Borrow for Backfilling Structures and Pipes. Bituminous Damp-Proofing shall be paid for at the contract unit price under Item 970. Bituminous Damp-Proofing.

Attachments:

NOTES:

1. MEMBRANE WATERPROOFING AND 4" x 8" x 2", 4000 psi, 1 1/2 in, 565 CEMENT CONCRETE BLOCKS LAID IN MORTAR OR OTHER WATERPROOFING PROTECTIVE COURSE, MIN. 2" THICK AS SPECIFIED IN THE STANDARD SPECIFICATIONS.
2. 4" Ø WEEP HOLES 10'-0" O.C. (JUST ABOVE PROTECTIVE COURSE).
3. EXTEND EVERY THIRD BAR FULL LENGTH AS SHOWN.
